

Fast Free Public DNS Servers

In very simple terms, DNS Servers can be compared to a phone book. The task of DNS is to lookup hostnames such as www.svquietly.com and translating it to its IP address of 168.144.77.230. DNS also has another very important use, email routing.

If you are a very experienced user, it may be possible to improve your browsing speed if you use one of the following free DNS servers. Put the first address in the primary dns field and the second in the secondary or alternate dns field.

Service provider: [Google](#)

- 8.8.8.8
